

CONNECTING STRUCTURE OF A MOUSE PAD WITH AN ARMREST

ABSTRACT

5

A mouse pad has an iron plate joined thereto while a chair armrest has a magnet joined to an upper portion thereof; the magnet has such a magnetic force on the iron plate as to be capable of preventing the mouse pad from falling off the armrest after the mouse pad is positioned on the
10 armrest, and attracted to the magnet; the mouse pad can be horizontally adjusted in position after it is attracted to the magnet.
